DETAILED ACTION

Response to Amendment

The following is in response to the amendment filed December 15, 2008.

Allowable Subject Matter

Claims 17-32, 34, and 36 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 17-21, 28, and 29 are allowed, because in an apparatus for axially oscillating a roll of a paper machine, the apparatus comprising first and second pairs of eccentric masses being mutually synchronized and driven in rotation by first and second drive shafts rotated in a manner to create a phase difference between the first and second drive shafts, the prior art does not disclose or suggest a drive train comprising a motor, a first gear driven by the motor and connected to the first drive shaft, a second gear mounted about the second drive shaft and directly intermeshed with the first gear, and an adjustment element arranged between the second gear and second drive shaft operable to rotate the second drive shaft relative to the first drive shaft.

Claims 22-27, 34, and 36 are allowed, because in an apparatus for axially oscillating a roll of a paper machine, the apparatus comprising first and second pairs of eccentric masses being mutually synchronized and driven in rotation by first and second drive shafts rotated in a manner to create a phase difference between the first and second drive shafts, the prior art does not disclose or suggest a drive train comprising a motor, a first gear driven by the motor and

Art Unit: 1791

connected to the first drive shaft, a second gear intermeshed with the first gear, and an adjustment element arranged between the second gear and second drive shaft which is operable to rotate the second drive shaft relative to the first drive shaft and is sleeve mounted for axial movement relative to the second drive shaft and the second gear.

Claims 30-32 are allowed, because in an apparatus for axially oscillating a roll of a paper machine, the apparatus comprising first and second pairs of eccentric masses being mutually synchronized and driven in rotation by first and second drive shafts rotated in a manner to create a phase difference between the first and second drive shafts, the prior art does not disclose or suggest a drive train comprising a motor, a first gear driven by the motor and connected to the first drive shaft, a second gear intermeshed with the first gear, an adjustment element arranged between the second gear and second drive shaft operable to rotate the second drive shaft relative to the first drive shaft, and a self-returning drive device connected to the adjustment element, the adjustment element and drive device being fitted inside the second gear.

Prior art devices employ two motors and/or intermediate gearing mechanisms of different construction operable for relative rotation of the first and second drive shafts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed December 15, 2008 have been considered.

In view of Applicant's argument and the amendment to the claims, Applicant has overcome the rejection under 35 U.S.C. 103(a) over Banning (WO 98/35094) in view of Austin (US 3,208,292) set forth previously. With respect to instant claim 17, the examiner agrees that neither Banning nor Austin teaches a second gear mounted about a second drive shaft and directly intermeshed with a first gear mounted about the first shaft.
